(54) Title: CONTENT RECEPTION TERMINAL AND RECORDING MEDIUM

(57) Abstract: An information reception unit (123) of a content reception terminal apparatus (102) receives encrypted content which includes header information showing a type of application. An access unit (127) has a storage reference table (400) which includes a plurality of sets, each set made up of header information and a storage folder name. The access unit (127) receives the encrypted content from the information unit (123), extracts the header information from the encrypted content, extracts a set having the same header information as the extracted header information from the storage reference table (400), and retrieves the storage folder name included in the extracted set. Next, the access unit (127) writes the received encrypted content to a folder shown by the extracted storage folder name.
